### Executive Summary

Penal Code section 1232 requires the Judicial Council to submit an annual report to the Legislature on the implementation of the California Community Corrections Performance Incentives Act of 2009 (Stats. 2009, ch. 608). The legislation seeks to alleviate state prison overcrowding by reducing the number of individuals on felony supervision who are sent there. The program is also designed to encourage county probation departments to use evidence-based supervision practices to accomplish these goals. This report includes background information about the act, describes policy changes that impacted the ongoing implementation of the program, and presents findings related to program outcomes. In previous years, the report included recommendations for program improvement. Recommendations have not been included in the past two reports due to those recommendations having been largely implemented.

### Relevant Previous Council Action

The California Community Corrections Performance Incentives Act (Sen. Bill 678) was enacted in 2009. Although the Judicial Council took no formal position on the bill, the council supported the bill in concept. Judicial Council staff collaborated with the Legislature to ensure the feasibility of meeting the Judicial Council's responsibilities under the bill.

On April 26, 2013, the Judicial Council received the 2013 *Report on the California Community Corrections Performance Incentives Act of 2009: Findings From the SB 678 Program* and directed the Administrative Director to submit this report to the California Legislature and Governor, as mandated by Penal Code section 1232. The report was submitted on April 30, 2013. Thereafter, the report has been updated and submitted annually.

## **Analysis/Rationale**

Senate Bill 678 was enacted in 2009 to alleviate state prison overcrowding by reducing the number of adult felony probationers sent to state prison for committing a new crime or violating the terms of probation. The law allocates a portion of the state savings from reduced prison costs to county probation departments that implement evidence-based supervision practices and achieve a reduction in the number of locally supervised felony offenders who are revoked to state prison. Under SB 678, the Judicial Council is required to submit a report to the Legislature and Governor on the implementation of SB 678, including information on the effectiveness of the SB 678 program. (Pen. Code, § 1232.)

This year's report provides background on the SB 678 program and summarizes program results. The program has been successful in supporting an increased use of evidence-based practices by probation departments and lowering the percentage of individuals returned to custody without evident negative impact to public safety. The report to the Legislature is included as Attachment A to this report.

The SB 678 performance-based funding mechanism has resulted in allocations to county probation departments ranging from \$88.6 million to \$138.3 million per fiscal year (FY), for a total of over \$1.4 billion, including \$122.8 million in FY 2023–24 alone. In addition, in each of the years since the start of the SB 678 program, the state's overall revocation rate has been lower than the original baseline rate of 7.9 percent.

California has made significant changes in criminal justice policies since SB 678 was passed in 2009, including (1) 2011 Public Safety Realignment, which restricted the ability of counties to sentence individuals to state prison for probation failure convictions; (2) Proposition 47 in 2014, which reduced certain crimes from felony to misdemeanor status, including retroactively; and (3) Assembly Bill 1950 (Stats. 2020, ch. 328) in 2020, which introduced new limits to the lengths of probation terms that could be imposed. In addition, the COVID-19 pandemic, and the state's response, had a substantial impact on the activities captured by the data used for this program and, as a result, on the program itself.

The SB 678 funding formula has been modified by the Legislature multiple times due to these changes. Most recently, due to the impacts of the COVID-19 pandemic, Assembly Bill 145 (Stats. 2021, ch. 80) allocated SB 678 funding to probation departments based on a schedule written into statute. Each department received an allocation equal to the highest amount allocated to them over the previous three fiscal years (FY 2018–19 through FY 2020–21). Assembly Bill

200 (Stats. 2022, ch. 58) extended the allocation schedule used in FY 2021–22 to remain in place for FY 2022–23 and FY 2023–24.

A fundamental component of SB 678 is the implementation of evidence-based practices by county probation departments. Findings from an annual survey indicate that the SB 678 program has been successful in increasing the levels of evidence-based practice implementation throughout the state.

### **Fiscal Impact and Policy Implications**

The Judicial Council receives \$1 million annually in funding to implement and administer this program, as well as support the Judicial Council’s work on public safety realignment. The Judicial Council collects data quarterly from probation departments and the courts, conducts an annual assessment of evidence-based practice implementation from probation departments, provides data-related technical assistance to probation departments and the courts, writes summary reports, performs criminal justice legal analyses and research, and performs a variety of other functions in support of these and other criminal justice–related projects.

Report title: *Report on the California Community Corrections Performance Incentives Act of 2009: Findings From the SB 678 Program (2024)*

Statutory citation: Penal Code section 1232

Date of report: September 23, 2024

The Judicial Council has submitted a report to the Legislature in accordance with Penal Code section 1232.

The following summary of the report is provided under the requirements of Government Code section 9795.

The Judicial Council is required to submit a comprehensive report to the Legislature and Governor on the implementation of Senate Bill 678, including information on the effectiveness of the SB 678 program. This year's report provides background on the SB 678 program and summarizes program results. The report also describes the Judicial Council's role in the collection, monitoring, and reporting of program outcome and implementation data.

The full report can be accessed at [www.courts.ca.gov/7466.htm](http://www.courts.ca.gov/7466.htm).

A printed copy of the report may be obtained by calling 415-865-8994.

## Executive Summary

The California Community Corrections Performance Incentives Act of 2009 (Sen. Bill 678)<sup>1</sup> was designed to alleviate state prison overcrowding and save state General Fund by reducing the number of adult felony probationers sent to state prison—and to meet these objectives without compromising public safety. The SB 678 program allocates a portion of state savings from reduced prison costs to county probation departments that implement evidence-based supervision practices and achieve a reduction in the number of locally supervised felony offenders revoked to state prison. The program has been successful in supporting the increased use of evidence-based practices by probation departments and lowering the percentage of individuals returned to custody without evident negative impact to public safety.

By lowering the number of supervised offenders sent to state prison through the SB 678 performance-based funding mechanism, the program has resulted in allocations to county probation departments ranging from \$88.6 million to \$138.3 million per fiscal year (FY), for a total of \$1.4 billion—including \$122.8 million in FY 2023–24 alone. In addition, in each of the years since the start of the SB 678 program, the state’s overall revocation rate has been lower than the original baseline rate of 7.9 percent. And although the number of offenders revoked has decreased, California’s crime rates have remained below the 2008 baseline levels, with no evidence to suggest that public safety has been negatively affected by the SB 678 program.

A fundamental component of SB 678 is the implementation of evidence-based practices by county probation departments. SB 678 defines evidence-based practices as “supervision policies, procedures, programs, and practices demonstrated by scientific research to reduce recidivism among individuals under probation, parole, or postrelease supervision.”<sup>2</sup> Although no probation department in the state has fully implemented evidence-based practices in all facets of supervision, findings from an annual survey indicate that the SB 678 program has been highly successful in increasing the levels of evidence-based practice implementation throughout the state.

All components of evidence-based practices measured in the survey are substantially higher than they were at baseline when the program began. The most significant advancements in evidence-based practice implementation occurred in the earliest stages of the program and have stabilized over time. Given these positive outcomes, the state and the counties have an interest in sustaining and expanding on the effectiveness of the SB 678 program.

California has made significant changes in criminal justice policies since SB 678 was passed in 2009. Notably, the 2011 Public Safety Realignment<sup>3</sup> addressing public safety reduced the

<sup>2</sup> Pen. Code, § 1229(d).

<sup>3</sup> Assem. Bill 109 (Stats. 2011, ch. 15).

number of probationers “eligible” for revocation to state prison and created two new supervision classifications: mandatory supervision and postrelease community supervision. The funding methodology for SB 678 was modified as a result of these changes. A trailer bill to the Budget Act of 2015 revised the SB 678 funding formula and created a funding methodology intended to serve as a long-term formula.<sup>4</sup>

The COVID-19 pandemic substantially affected the practices measured by the data used in calculating SB 678 allocations according to the funding formula used from FY 2015–16 through FY 2020–21. As a result, the FY 2021–22 budget enacted by Assembly Bill 145 (Stats. 2021, ch. 80), allocated SB 678 funding to probation departments based on a specifically defined schedule. Each department received an allocation equal to the highest amount allocated to them over the previous three fiscal years (FY 2018–19 through FY 2020–21). More recently, Assembly Bill 200 (Stats. 2022, ch. 58) extended the allocation schedule used in FY 2021–22 to remain in place for FY 2022–23 and FY 2023–24.

Since its inception in 2009, SB 678 has matured from a program that focused on implementing evidence-based practices to one that focuses on their sustainability and expansion. Many of the recommendations made by the Judicial Council in previous years, including the implementation of a stable funding formula, have been realized. The Judicial Council continues to support the adoption of previous recommendations through continued or expanded research and will work with probation departments and the Chief Probation Officers of California to update the annual assessment and evaluation process.

---

<sup>4</sup> Sen. Bill 85 (Stats. 2015, ch. 26).

## **Introduction**

The California Community Corrections Performance Incentives Act of 2009 (implementation of which is hereafter referred to as the “SB 678 program”) is designed to alleviate state prison overcrowding and save state General Fund by reducing the number of county-supervised adult felony offenders sent to state prison for committing new crimes or violating the terms of their supervision, and to meet these objectives without compromising public safety. The SB 678 program allocates a portion of reduced incarceration costs to county probation departments to support the use of evidence-based supervision practices and achieve a reduction in the number of supervised felony offenders who are revoked to state prison or sent to state prison on a new charge.

Through the SB 678 performance-based funding mechanism, county probation departments have received over \$1.4 billion since program inception, including allocations totaling \$122.8 million in FY 2023–24. Allocations to county probation departments have ranged from \$88.6 million to \$138.3 million per fiscal year.

The Legislature tasked the Judicial Council with reporting annually on the implementation and outcomes of the SB 678 program. This report:

- Presents a brief background on the SB 678 program and documents changes made to the program as a result of criminal justice policy changes and the impact of the COVID-19 pandemic;
- Provides results from the first 14 years of the program, including the impact of the SB 678 program on revocation rates, the amount of state savings from the reduction in revocations to prison, and funding allocations to the counties;
- Provides information on trends in public safety, county probation departments’ reported use of funds, and implementation of evidence-based practices.

## I. SB 678 Background

Courts have the authority to order defendants to be placed on probation (a judicially imposed suspension of sentence and a form of community supervision) in lieu of a long-term jail or prison sentence.<sup>5</sup> If an individual successfully completes probation without a violation or a new charge, the probationer will not be required to serve any further custody time in jail or prison. If the individual violates the conditions of supervision or commits a new offense, supervision may be “revoked” and the individual sent to state prison or county jail, resulting in incarceration costs to the state or county.

Each of California’s 58 counties administers its own adult felony probation system.<sup>6</sup> In a 2009 report, the Legislative Analyst’s Office (LAO) estimated that 40 percent of new prison admissions from the courts were the result of probation revocations.<sup>7</sup> The report also noted that, in the preceding years, many county probation departments had insufficient resources to implement evidence-based probation supervision practices that could help reduce probation failures.<sup>8</sup> The LAO recommended creation of a program to provide counties with a financial incentive to improve their community corrections practices and lower their probation failure rates.

Subsequently, in 2009, the Legislature enacted the California Community Corrections Performance Incentives Act (SB 678) with bipartisan support. This legislation created an incentive program designed to improve public safety, alleviate state prison overcrowding, and save state General Fund by supporting effective supervision practices and reducing the number of adult felony probationers sent to state prison for committing new crimes or violating the terms of probation.

In FY 2009–10, the state Legislature appropriated \$45 million for county probation departments to begin expanding the use of evidence-based practices with adult felony probationers. After the first year of the program, probation departments received a portion of the state’s savings

---

<sup>5</sup> Pen. Code, § 1228(c): “Probation is a judicially imposed suspension of sentence that attempts to supervise, treat, and rehabilitate offenders while they remain in the community under the supervision of the probation department. Probation is a linchpin of the criminal justice system, closely aligned with the courts, and plays a central role in promoting public safety in California’s communities.”

<sup>6</sup> Probation differs from parole, which is a form of supervision that takes place upon release from prison for specified offenders and is administered by the California Department of Corrections and Rehabilitation.

<sup>7</sup> Legislative Analyst’s Office, *Achieving Better Outcomes for Adult Probation* (May 2009), pp. 19–20, [www.lao.ca.gov/2009/crim/Probation/probation\\_052909.pdf](http://www.lao.ca.gov/2009/crim/Probation/probation_052909.pdf).

<sup>8</sup> Evidence-based practices are defined as “supervision policies, procedures, programs, and practices demonstrated by scientific research to reduce recidivism among individuals under local supervision.” (Pen. Code, § 1229(d).)

attributed to avoided incarceration costs resulting from a reduction in the probation failure rate (PFR) compared to a baseline PFR.<sup>9</sup>

The amount of savings the state shared with probation departments each year was originally determined by each county's improvement in its probation failure rate, as compared to its 2006–2008 baseline rate.<sup>10</sup> A county that sent fewer individuals to prison than would be expected (applying their baseline rate to the current year's felony probation population) would receive a share of the state savings from reduced incarceration costs.<sup>11</sup> Counties that were unsuccessful in reducing their PFRs were also provided with a small amount of funding to bolster their efforts to implement evidence-based practices and reduce recidivism while counties with PFRs more than 50 percent below the statewide average were given high-performance awards to support the ongoing use of evidence-based practices in counties.<sup>12</sup>

There have been numerous policy changes since the original implementation of SB 678 that have impacted the program and how its funds are allocated to counties. These include 2011 Public Safety Realignment, which restricted the ability of counties to sentence individuals to state prison for probation failure convictions; Proposition 47 in 2014,<sup>13</sup> which reduced certain crimes from felony to misdemeanor status, allowed for retroactive application, and resulted in reducing the felony probation population; and AB 1950 in 2020, which introduced new limits to the lengths of probation terms that could be imposed. Changes to the SB 678 allocations and data collection reflecting these changes include the incorporation of mandatory supervision and postrelease community supervision (PRCS) populations and a focus on admissions to prison instead of probation failures. In addition, the COVID-19 pandemic had a substantial impact on program activities, resulting in allocations for FY 2021–22 through FY 2023–24 determined not by allocation formula but by a schedule given in Penal Code section 1233.12.

---

<sup>9</sup> Pen. Code, § 1233.1(a). The PFR was initially defined in statute as the number of adult felony probationers revoked to state prison in a year as a percentage of the average probation population during the same year.

<sup>10</sup> The baseline probation failure rate is a weighted average of the PFR in 2006, 2007, and 2008. After the conclusion of each calendar year, the Director of Finance—in consultation with the California Department of Corrections and Rehabilitation, Joint Legislative Budget Committee, Chief Probation Officers of California, and Judicial Council—calculates for that calendar year an estimate of the number of adult felony offenders, supervised by probation, that each county successfully prevented from being sent to prison (or to jail, following Realignment) based on the reduction in the county's return-to-prison rate. In making this estimate, the Director of Finance is required to adjust the calculations to account for changes in each county's adult felony caseload in the most recently completed calendar year, as compared to the county's adult felony population during the baseline period. (Pen. Code, § 1233.1(c), (d).)

<sup>11</sup> Depending on how a county's PFR compared to the statewide average, a county received either 40 or 45 percent of the state savings. Counties with a PFR no more than 25 percent above the statewide PFR received 45 percent of the state savings. Counties with a PFR greater than 25 percent above the statewide PFR received 40 percent of the state savings.

<sup>12</sup> From FY 2010–11 to FY 2014–15, these awards were funded with 5 percent of the overall savings to the state. A county could receive an award based on state incarceration cost savings or a high-performance grant payment but not both; the county could choose which award to receive in a year when it qualified for both.

<sup>13</sup> Prop. 47 was approved by the voters at the November 2014 General Election.

## II. Program Results

The analysis of SB 678's effectiveness is guided by the Legislature's stated intent<sup>14</sup> and summarized in three overarching questions:

- How did the SB 678 program affect revocation rates, and what was the effect on public safety?
- Did the state save money as a result of reductions in locally supervised populations sent to state prison, and was a portion of these savings directed to county probation departments to implement evidence-based practices?
- Did county probation departments implement evidence-based practices, and how did these practices affect the outcomes of locally supervised populations?

### A. SB 678 Program Impact on Revocation Rates and Public Safety Outcomes

#### Revocation rates during the SB 678 program

Changes to the SB 678 program and funding formula have seen a number of changes that have altered the way program effectiveness is measured.<sup>15</sup> The following analysis focuses mainly on the adult felony probation population because data on this group have been tracked since the project inception; however, some data on the supervised populations created post-Realignment are also displayed.

Because of the COVID-19 pandemic and its effect on supervision and correction practices, statewide rates of revocation to prison and revocation to jail declined significantly in 2020. In 2023, the revocation-to-prison figure (2.8 percent) continued to increase for the third straight year following the 2020 low, but still remains below that of the three years prior to the onset of the pandemic (Figure 1). The statewide revocation-to-jail rate followed a similar pattern

---

<sup>14</sup> "Providing sustainable funding for improved, evidence-based probation supervision practices and capacities will improve public safety outcomes among adult felons who are on probation. Improving felony probation performance, measured by a reduction in felony probationers who are sent to prison because they were revoked on probation or convicted of another crime while on probation, will reduce the number of new admissions to state prison, saving taxpayer dollars and allowing a portion of those state savings to be redirected to probation for investing in community corrections programs." (Pen. Code, § 1228(d).)

<sup>15</sup> The SB 678 program's effectiveness was originally measured annually by comparing each probation department's probation failure rate (the percentage of felony probationers sent to prison) to a baseline period before the program was implemented (a weighted average of the PFR in 2006, 2007, and 2008). The return-to-prison rate was initially calculated as the total number of adult felony probationers sent to prison in the year as a percentage of the average statewide adult felony probation population for that year. (Pen. Code, § 1233.1(b)(1).) Penal Code section 1233.1(b) was revised by Senate Bill 105 (Stats. 2013, ch. 310) to include subdivision (b)(2), adding commitments to county jail under section 1170(h) and to place this formula in effect each year, beginning with calendar year 2013. Section 1233.1(c) was also revised by SB 105 to include felony probationers sent to state prison or county jail, and to place this revised county probation failure rate formula in effect each year, beginning with calendar year 2013.

increased slightly for the third straight year, to 1.5 percent from 1.4 percent, but remained below what was reported in the years immediately preceding the COVID-19 pandemic.

**FIGURE 1. PERCENTAGE OF FELONY PROBATION INCARCERATION RATES**

Source: Probation revocation data reported by probation departments to the Judicial Council.

Note: Incarceration rate includes only those supervised under adult felony probation.

The proportion of revocations to incarceration to prison rather than to jail in 2023 was slightly lower from the high rates seen in 2021 and 2022 (see Figure 2, noting the lower overall instances of these revocations for 2020–2023 than for previous years).

**FIGURE 2. PERCENTAGE OF FELONY PROBATION FAILURES TO JAIL AND PRISON**

Source: Revocation data reported by probation departments to the Judicial Council.

Note: Chart includes only those supervised under adult felony probation.

Following Realignment, Senate Bill 85 (Stats. 2015, ch. 26) revised the SB 678 program to include all supervised felony populations—under felony probation, postrelease community supervision, and mandatory supervision—and to focus exclusively on revocations to state prison. These additional supervision categories were added to the quarterly data reported by probation departments. Revocation-to-prison rates for all supervision types are shown in Figure 3.

When reporting on all felony supervision types that began in 2013, the combined RPR (including all supervision types) averaged 3.2 percent. From 2015 to 2019, there had been an uptick in RPR across all supervision types, with the overall rate approaching 3.6 percent of the average felony supervision population. In 2023, the overall rate continued to increase for the third straight year from 2020’s low, albeit only slightly. The overall rate largely reflects the felony probation population’s rate due to that population comprising 84 percent of the total population, a proportion that remains unchanged in 2023 from what was reported the prior three years (Figure 4).

The rates for the mandatory supervision and postrelease community supervision populations were down in 2023 after rising the previous year. The rate for mandatory supervision populations was down significantly, to the rate comparable only during the initial year of the pandemic in CY 2020, while the rate for PRCS was down only slightly from 2022 and remained above the 2021 rate.

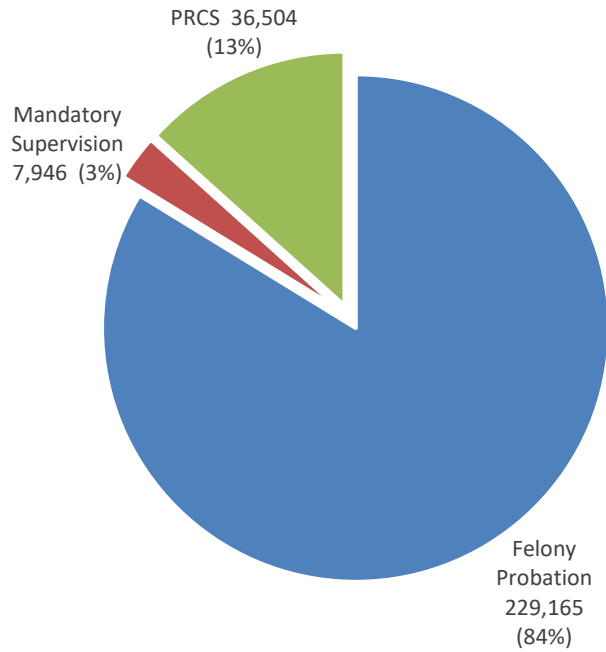

FIGURE 3. FELONY SUPERVISION REVOCATION TO PRISON RATES

### **Risk level of locally supervised populations**

An important tenet of evidence-based practices in probation relates to ensuring that a probationer’s assessed risk level informs supervision practices, with the highest-risk individuals receiving the most intensive supervision. Distribution of risk levels in 2023 was consistent with that seen in 2022, with individuals assessed as low risk again making up the largest group (Figure 5).<sup>16</sup>

---

<sup>16</sup> See notes at the bottom of Table 1, Reported Use of Funds for Evidence-Based Practices, below, for a list of county probation departments and years for which survey responses were missing.

**FIGURE 5. PERCENTAGE OF SUPERVISED CASELOAD BY RISK LEVEL**

Source: *Implementation of Evidence-Based Practices: Annual Assessment Survey* (data reported by probation departments to the Judicial Council).

Notes: Percentages represent statewide averages. Caseload includes those supervised under felony probation, mandatory supervision, and postrelease community supervision.

**SB 678 program and public safety outcomes**

The Legislature designed the SB 678 program to save state funds and improve the effectiveness of community supervision practices without compromising public safety.<sup>17</sup> The sweeping and significant changes to the criminal justice system over the past fifteen years, including Public Safety Realignment and Proposition 47, make it impossible to isolate and measure the impact of the SB 678 program on public safety. However, data suggest that public safety has not been compromised in the years since the programs was initially implemented.

Crime data presented in Figure 6 indicate that the property crime rate per 100,000 population in California may have decreased in 2023 after two consecutive years of increase. The statewide violent crime rate per 100,000 population may have risen for the fourth year. Annual increases or decreases in the rates for these broad categories of crimes at the statewide level are influenced by a complex array of underlying factors that can be difficult to fully measure or isolate. The most

<sup>17</sup> Pen. Code, §§ 1228(c), 1229(c)(1).

recent year of available crime data, 2023 is particularly problematic and may have been compromised by reporting errors in one specific jurisdiction.<sup>18</sup>

## **B. Allocation of State Savings to County Probation Departments; Reported Use of Funds for Evidence-Based Practices and Evaluation**

### **State savings and allocation to county probation departments**

The SB 678 program has been effective in saving state General Fund. The evolution of the funding formula to its current methodology has been outlined in detail in previous reports to the Legislature on the SB 678 program.<sup>19</sup> The SB 678 funding formula used through FY 2020–21 has three funding components and is discussed in greater detail in Appendix B.

As previously stated, the COVID-19 pandemic had a significant impact on the practices measured by the data used in calculating SB 678 allocations. As a result, the Legislature chose to implement a different funding formula for FY 2021–22. Assembly Bill 145 (Stats. 2021, ch. 80) allocated SB 678 funding to probation departments based on a specifically defined schedule,<sup>20</sup> in which each department received an allocation equal to the highest amount allocated to them over the previous three fiscal years (FY 2018–19 through FY 2020–21).<sup>21</sup> More recently, Assembly Bill 200 (Stats. 2022, ch. 58) extended the allocation schedule used in FY 2021–22 to remain in place for FY 2022–23 and FY 2023–24.

<sup>18</sup> See, e.g., “California Report Says Violent Crime Rate Is Up Statewide. Our Analysis Suggests That Is Wrong,” *San Francisco Chronicle*, July 24, 2024, <https://www.sfchronicle.com/california/article/crime-violence-trends-19551608.php>.

<sup>19</sup> Previous reports are available on the “Legislative Reports” webpage on the California Courts website at [www.courts.ca.gov/7466.htm](http://www.courts.ca.gov/7466.htm).

<sup>20</sup> Pen. Code, § 1233.1.

<sup>21</sup> See Appendix C: SB 678 Allocation Payments, FY 2018–19 to FY 2023–24 for these amounts.

## **Probation departments' reported use of funds for evidence-based practices and evaluation**

County probation departments across California reported<sup>22</sup> using SB 678 program funds to implement a variety of evidence-based practices (Table 1).<sup>23</sup> The Judicial Council uses the self-reported information from probation departments to provide context for the ways in which resources are allocated.

---

<sup>22</sup> Each year, the Judicial Council surveys probation departments through the *Implementation of Evidence-Based Practices: Annual Assessment Survey* (Annual Assessment). This assessment requires each probation department to measure its current level of implementation of evidence-based practices, as well as the programs and practices used or funded during the previous fiscal year. The Annual Assessment is used to satisfy the outcome-based reporting requirements outlined in SB 678. (See Pen. Code, § 1231(b).) This survey also fulfills the requirement in Penal Code section 1231(c) that counties provide an annual written report to the Judicial Council. The Annual Assessment has been administered each year beginning in FY 2010–11. In 2016, the report time frame was revised to the calendar year, rather than fiscal year.

<sup>23</sup> Caution is advised when interpreting these results. Spending categories are neither mutually exclusive nor exhaustive. For example, funds for support of officers may be used for training or for the improvement of data collection because case-carrying officers often perform these data collection functions. Reported proportions are representative of the SB 678 funds *spent* on the implementation of evidence-based practices, not the amount of funds received.

**TABLE 1. REPORTED USE OF FUNDS FOR EVIDENCE-BASED PRACTICES**

Spending Category	Average % Spent, per Calendar Year <sup>a</sup>						
	CY 2017 (N = 55)	CY 2018 (N = 52)	CY 2019 (N = 49)	CY 2020 (N = 58)	CY 2021 (N = 58)	CY 2022 (N = 49)	CY 2023 (N = 54)
Hiring, support, and/or retention of case-carrying officers/supervisors	63%	59%	57%	63%	60%	58%	57%
Evidence-based treatment programs	18	18	17	16	16	17	18
Improvement of data collection and use	3	4	5	4	5	5	6
Use of risk and needs assessment	4	6	6	4	6	6	4
Use/implementation of intermediate sanctions	2	3	4	3	5	5	4
Evidence-based practices training for officers/supervisors	4	3	4	3	3	4	4
Other evidence-based practices <sup>b</sup>	5	7	8	7	6	6	7

<sup>a</sup> The following counties provided incomplete or invalid responses to these questions and were excluded from these analyses:  
**CY 2017** — Alameda, Del Norte, Mendocino  
**CY 2018** — El Dorado, Glenn, Los Angeles, Mendocino, Stanislaus, Tehama  
**CY 2019** — Del Norte, El Dorado, Glenn, Inyo, Kings, Los Angeles, Modoc, San Diego, Santa Cruz  
**CY 2022** — Amador, Glenn, Imperial, Mariposa, Modoc, Mono, San Joaquin, Shasta, Trinity  
**CY 2023** — El Dorado, Mariposa, Santa Cruz, Sacramento

<sup>b</sup> Includes operational costs, administration and clerical support, materials, incentives, and associated start-up costs. A number of counties reported placing some funds in a reserve account for program maintenance, additional positions, and services related to their SB 678 program.

Probation departments have consistently reported using the majority of their SB 678 funds on the hiring, retention, and training of probation officers to supervise medium- and high-risk probationers consistent with evidence-based practices. Probation departments also report using a sizable proportion of their SB 678 funds on evidence-based treatment programs and services. The departments reported spending funds on five major categories of treatment programs and services:

- Cognitive behavioral therapy;
- Outpatient substance abuse treatment programs;
- Day reporting centers;
- Vocational training/job readiness programs; and
- Other treatment programs/services.

### **C. Implementation of Evidence-Based Practices**

The SB 678 program was designed specifically to improve the effectiveness of probation departments’ supervision practices through increased use of evidence-based practices. The

SB 678 program recognizes five areas of evidence-based practices as most critical for implementation for county probation departments:<sup>24</sup>

- Use of risk and needs assessments;
- Effective supervision practices;
- Collaboration with justice partners;
- Effective management and supervision; and
- Effective treatment and intervention.

To measure probation departments' self-reported evidence-based practice implementation levels<sup>25</sup> and changes in evidence-based practice implementation over time,<sup>26</sup> the Judicial Council created the *Implementation of Evidence-Based Practices: Annual Assessment Survey*.<sup>27</sup> Each probation department is required to provide assessment results annually to the Judicial Council. Findings from the Annual Assessment indicate that the SB 678 program has been highly successful in increasing the levels of evidence-based practice implementation throughout the state (see Appendix D).

All components of evidence-based practices measured in the survey are indicative of substantially higher rates of implementation of evidence-based practices than at baseline. 2023 survey responses show reported implementation levels that are slightly down from those of 2022, but remain in line with recent gains and above baseline implementation rates. Figure 7 below shows the statewide implementation of evidence-based practices rates for CY 2023 versus the baseline level (FY 2010-11), based on survey responses. The Judicial Council continues to evaluate whether a revised Annual Assessment is necessary to more fully capture continued evidence-based practice adoption by probation departments.

---

<sup>24</sup> See Appendix D for more information about each of these areas.

<sup>25</sup> The Annual Assessment includes 41 scaled items designed to measure the level in which specific evidence-based practice focus areas have been implemented by probation departments. Scaled items are scored on a four-point scale from 0 to 3, with 3 as a gold standard rating for a given aspect of evidence-based practice. Implementation levels for the five evidence-based practice categories are calculated by summing a department's responses in a particular category and dividing that sum by the total possible points for that category. Overall evidence-based practice implementation levels for each probation department are calculated by taking the average of a department's scores across the five evidence-based practice categories.

<sup>26</sup> Increases in the self-reported levels of evidence-based practice implementation have flattened over time given the structure of the Annual Assessment's scoring scheme. It may be challenging for counties to achieve the highest/gold standard rating across multiple items and multiple categories. As a result, increases in the percentage change in evidence-based practice implementation in the future may be smaller than those reported in the current or previous years.

<sup>27</sup> Because the survey was developed before Realignment, it initially focused solely on the felony probation supervision population. Beginning in 2014, probation departments were asked about their use of evidence-based practices in supervising all felony populations, including individuals on mandatory supervision and PRCS.

**FIGURE 7. REPORTED USE OF EVIDENCE-BASED PRACTICES BY TYPE, BASELINE VERSUS 2023**

## Conclusion

It has been 15 years since the California Community Corrections Performance Incentives Act (SB 678) passed. Fourteen years of data have shown this to be an effective incentive program that is operating as the Legislature intended when it created the program for county probation departments.

The SB 678 program was designed to:

- Alleviate state prison overcrowding;
- Save state General Fund monies by reducing the number of individuals supervised by probation who are sent to state prison for committing a new crime or violating the terms of supervision;
- Increase the use of evidence-based supervision practices; and
- Achieve these goals without compromising public safety.

SB 678 has been successful in each of these areas. Despite changes in the law resulting in higher-risk individuals constituting an increasing proportion of felony supervision, county probation departments have maintained lower rates of prison returns. Probation departments around the state have implemented and continue to support important evidence-based practices.

The Judicial Council, in accordance with its mandate under Penal Code section 1232(e), has made 10 recommendations regarding SB 678 in these annual reports since 2013. The recommendations focused on three general areas: program sustainability and stabilization; program evaluation and research; and program improvement, expansion, and replication. At this time, there are no additional recommendations for the improvement of the SB 678 program. The Judicial Council will continue to collect and analyze these data and to work in collaboration with county probation departments and the Chief Probation Officers of California in doing so. Additional recommendations for the SB 678 program may be put forth in future annual reports.

Since its inception in 2009, SB 678 has matured from a program that focused on implementing evidence-based practices to one that focuses on their sustainability and expansion. The state can build on the success of, and lessons learned from, this carefully designed program by considering opportunities to replicate the SB 678 model and advancements in technology to address other challenges facing the criminal justice system.

## Appendix A: Percentage of Failure/Return-to-Prison Rates by County, 2017–2023

The return-to-prison rate used in Table A is calculated using the reported number of individuals who were sent to state prison for either a supervision violation or a new offense, across all types of local felony supervision—felony probation, mandatory supervision, and postrelease community supervision.

It should be noted that, although the term “return to prison” is used to indicate probation revocations, many individuals supervised by probation departments have never been in prison custody.

**TABLE A. PERCENTAGE OF FAILURE/RETURN-TO-PRISON RATES BY COUNTY, 2017–2023\***

Tulare	3.2	3.1	3.2	2.0	3.1	3.3	3.6%
Tuolumne	2.6	3.1	3.1	2.2	3.8	4.0	3.2%
Ventura	7.2	8.0	7.6	4.9	8.0	8.1	7.9%
Yolo	4.5	3.2	2.7	2.0	2.1	3.3	3.8%
Yuba	10.3	9.1	8.5	9.5	13.4	13.4	14.5%

\* Counties with smaller felony offender populations will be more reactive to small changes in the actual number of revocations. For example, in a county with 1,000 felony offenders, an increase of five revocations would increase the return-to-prison rate (RPR) slightly, from 5 percent to 5.5 percent, whereas in a county with only 100 felony offenders, an increase of five revocations would double the RPR, from 5 percent to 10 percent.

In previous reports, this appendix reported the felony offender failure rate using combined failures to state prison and county jail for individuals on probation only. These reports are available on the “Legislative Reports” webpage of the California Courts website at [www.courts.ca.gov/7466.htm](http://www.courts.ca.gov/7466.htm).

## **Appendix B: SB 678 Funding Methodology**

### **Background**

Senate Bill 678, the California Community Corrections Performance Incentives Act of 2009, establishes a system of performance-based funding that shares state General Fund savings with county probation departments that reduce the number of adult felony offenders who are revoked to state prison in a year as a percentage of the average offender population during the same period. At the center of SB 678 is the use of incentive-based funding to promote the use of evidence-based practices and improve public safety.

Since passage of the act, the State of California has adopted significant changes in criminal justice policies that directly impacted SB 678—most notably the 2011 Public Safety Realignment, which reduced the number of probationers eligible for revocation to state prison and created two new groups of offenders subject to local supervision. To maintain effective incentives and account for the significant changes in criminal justice policy, Senate Bill 85, adopted as a trailer bill to the 2015–16 State Budget, revised the SB 678 funding formula and created a funding methodology that should serve as a long-term formula. Before the adoption of SB 85, the state adopted temporary measures.

### **Revised funding methodology, FY 2015–16**

Below is a summary of the SB 678 funding formula as revised in 2016, which includes three funding components.

#### **Funding component 1: comparison of county to statewide return-to-prison rates**

The first funding component measures each county's performance against statewide failure rates. Each county's return-to-prison rate (RPR)—which equals the number of individuals on felony probation, mandatory supervision, or postrelease community supervision sent to prison as a percentage of the total supervised population—is compared to statewide RPRs since the original SB 678 baseline period (2006 through 2008).

If a county's RPR is less than or equal to the original statewide baseline of 7.9 percent, the county will receive a percentage of its highest SB 678 payment from the period between program inception and FY 2014–15. Depending on how a county's RPR compares to statewide RPRs, a county can receive between 40 and 100 percent of its highest payment. The statewide RPRs and percentages of savings are defined in Table B.

- If a county's RPR is below 1.5 percent, the county will receive 100 percent of its highest prior payment.
- If a county's RPR is equal to or greater than 1.5 percent but no higher than 3.2 percent, the county will receive 70 percent of its highest prior payment.
- If a county's RPR is above 3.2 percent but no higher than 5.5 percent, the county will receive 60 percent of its highest prior payment.

- If a county’s RPR is above 5.5 percent but no higher than 6.1 percent, the county will receive 50 percent of its highest prior payment.
- If a county’s RPR is above 6.1 percent but no higher than 7.9 percent, the county will receive 40 percent of its highest prior payment.

**TABLE B. TIER CATEGORIES BASED ON RETURN-TO-PRISON RATES**

<b>Tier Category Based on Total County RPR</b>	<b>Percentage of Highest Prior SB 678 Payment</b>
RPR <1.5%	100%
RPR ≥1.5% and ≤3.2%	70%
RPR >3.2% and ≤5.5%	60%
RPR >5.5% and ≤6.1%	50%
RPR >6.1% and ≤7.9%	40%

**Funding component 2: comparison of each county’s return-to-prison rate and its failure rate in the previous year**

The second funding component is based on how each county performs in comparison to its performance the previous year. Each year, a county’s RPR from the previous year is applied to its current year’s felony supervised populations to calculate the expected number of prison revocations (see the explanation in the paragraph that follows). If a county sends fewer individuals on felony supervision to prison than the expected number, the county will receive 35 percent of the state’s costs to incarcerate an individual in a contract bed multiplied by the number of avoided prison stays.<sup>28</sup> The number of avoided prison revocations is calculated separately for each felony supervised population (i.e., felony probation, mandatory supervision, postrelease community supervision).

For example, if a county had a 3.2 percent RPR for its felony probation population in 2013 and 10,000 people on felony probation in 2014, its expected number of felony probation prison revocations in 2014 would be 320. If only 300 felony probationers were actually sent to prison in 2014, the county avoided sending 20 individuals to prison and would receive 35 percent of the state’s cost to imprison these 20 individuals in a contract bed.

To continue to receive funds under this funding component, probation departments must continually reduce their return-to-prison rates year after year.

<sup>28</sup> A “contract bed” is defined as “[t]he cost to the state to incarcerate in a contract facility and supervise on parole an offender who fails local supervision and is sent to prison.” (Pen. Code, § 1233.1(a).)

**Funding component 3: \$200,000 minimum payment**

The third funding component guarantees a minimum payment of \$200,000 to each county to support ongoing implementation of evidence-based practices. If a county's total payment (from funding components 1 and 2) is less than \$200,000, the Department of Finance will increase the final award amount to a total of \$200,000.

## Appendix C: SB 678 Allocation Payments, FY 2018–19 to FY 2023–24

**TABLE C. SENATE BILL 678 ALLOCATION PAYMENTS (IN DOLLARS)**

	FY 2018–19	FY 2019–20	FY 2020–21	FY 2021–22	FY 2022–23	FY 2023–24
<b>Statewide</b>	<b>\$109,317,411</b>	<b>\$112,764,436</b>	<b>\$112,514,699</b>	<b>\$122,829,397</b>	<b>\$122,829,397</b>	<b>\$122,829,397</b>

## **Appendix D: SB 678 Monitoring, Reporting, and Evidence-Based Practice Implementation**

Senate Bill 678 requires county probation departments to report on their implementation of evidence-based practices and outcomes to enable the Legislature to monitor whether the program is having its intended effect.<sup>29</sup> The Judicial Council collects quarterly statewide outcome data reported by the counties.<sup>30</sup> Since the start of the SB 678 program, the Judicial Council has provided technical assistance in data quality assurance to probation departments through site visits, multicounty conference calls, and contacts with individual counties.<sup>31</sup>

The Judicial Council's data collection methods obtain the most critical data, balancing county resource constraints with the Legislature's interest in program evaluation based on accurate and detailed information, as mandated by statute. Data reported by county probation departments focus on quantitative outcomes, including the number of felony offenders placed on local supervision, revoked to prison or jail, and convicted of a new felony offense during the reporting period (see Appendix E). The Judicial Council reports program data to the Department of Finance, which uses the data to determine the appropriate annual level of performance-based funding for each county probation department.<sup>32</sup>

In addition to collecting quarterly outcome-focused data, the Judicial Council developed an annual survey, *Implementation of Evidence-Based Practices: Annual Assessment Survey* (Annual Assessment), to gather information on probation departments' implementation of evidence-based practices and assist the departments in fulfilling the legislative mandate for evaluating the effectiveness of the SB 678 program.<sup>33</sup> The Annual Assessment focuses on five critical EBPs:

- Use of validated risk and needs assessments;
- Effective supervision practices, including training on evidence-based practices;
- Effective treatment and targeted intervention;
- Effective management practices; and

---

<sup>29</sup> Pen. Code, § 1231(a): "Community corrections programs funded pursuant to this chapter shall identify and track specific outcome-based measures consistent with the goals of this act." *Id.*, § 1231(c): "Each CPO [chief probation officer] receiving funding pursuant to Sections 1233 to 1233.6, inclusive, shall provide an annual written report to the Judicial Council, evaluating the effectiveness of the community corrections program, including, but not limited to, the data described in subdivision (b)."

<sup>30</sup> Pen. Code, § 1231(b).

<sup>31</sup> The Judicial Council's Criminal Justice Services office has developed uniform data definitions, created and administered surveys, checked data submissions, matched revocation records submitted by probation departments with California Department of Corrections and Rehabilitation records, and investigated record inconsistencies.

<sup>32</sup> Pen. Code, §§ 1231(d), 1233.1.

<sup>33</sup> Pen. Code, §§ 1231(c), 1232.

- Collaboration among justice system partners.<sup>34</sup>

The survey is designed to measure probation departments’ reported evidence-based practice implementation changes over time and to identify program spending priorities.

The SB 678 program was designed to improve the effectiveness of probation departments’ supervision practices through increased use of evidence-based practices, defined in statute as “supervision policies, procedures, programs, and practices demonstrated by scientific research to reduce recidivism among individuals under local supervision.”<sup>35</sup> The term denotes a wide range of systematic supervision practices that research has demonstrated to be effective in promoting and supporting positive individual behavioral change in people with criminal convictions. The

**FIGURE D.1. REPORTED USE OF ALL EVIDENCE-BASED PRACTICES OVER TIME**

SB 678 program provides support to probation departments in their efforts to implement necessary programmatic and systemic changes, and to improve practices that directly target adult felony offender behavior.<sup>36</sup>

The SB 678 program recognizes five areas of evidence-based practice as most critical for improvement for county probation departments. Each department is required to provide a yearly report (Annual Assessment)<sup>37</sup> to the Judicial Council evaluating the effectiveness of its programs focusing on these five areas.<sup>38</sup> This survey is designed to measure probation departments’ self-reported evidence-based practice implementation

levels<sup>39</sup> and changes in evidence-based practice implementation over time.

<sup>34</sup> The importance of each of these areas has been supported in a number of reports; see, for example, Crime and Justice Institute at Community Resources for Justice, *Implementing Evidence-Based Policy and Practice in Community Corrections* (National Institute of Corrections, 2d ed. Oct. 2009), <https://nicic.gov/resources/nic-library/all-library-items/implementing-evidence-based-policy-and-practice-community>.

<sup>35</sup> Pen. Code, § 1229(d).

<sup>36</sup> Pen. Code, § 1230(b)(3)(A)–(E).

<sup>37</sup> Because the survey was developed before Realignment, it initially focused solely on the felony probation supervision population. Beginning in 2014, probation departments were asked about their use of evidence-based practices in supervising all felony populations, including individuals on mandatory supervision and postrelease community supervision.

<sup>38</sup> Pen. Code, § 1231(c).

<sup>39</sup> The Annual Assessment includes 41 scaled items designed to measure the level in which specific evidence-based practice focus areas have been implemented by the probation departments. Scaled items are scored on a four-point

Findings from the Annual Assessment indicate that the SB 678 program has been highly successful in increasing the levels of evidence-based practice implementation throughout the state (Figure D.1). All components of evidence-based practice measured in the survey are indicative of substantially higher implementation of EBPs than at baseline. Overall reported implementation rates were lower in 2023 than in the prior two years, matching the 2019 rate.

### Validated risk and needs assessments

Validated tools for risk and needs assessment (RNA) are standardized instruments that typically measure both static risk factors (those that do not change, e.g., criminal history) and dynamic risk factors (those that potentially may change, e.g., education level). The use of validated RNA tools has been substantiated as one of the most valuable components of evidence-based practices for supervision of adult felony offenders.<sup>40</sup> The tools can be used to provide caseload information to probation departments, helping officers to identify and focus on higher-risk populations while investing fewer resources in low-risk adult felony offenders. Using validated risk and needs assessments to focus resources on higher-risk offenders, and to structure caseloads so that low-risk offenders are supervised separately from higher-risk offenders, has proven to be an effective evidence-based practice. The Annual Assessment category of RNA information

assessment tools and how thoroughly the department trains and oversees users of assessments (Figure D.2).

**FIGURE D.2. PERCENTAGE OF REPORTED IMPLEMENTATION OF RNA INFORMATION**

Since the implementation of SB 678, probation departments have made significant improvements in incorporating the use of validated risk and needs assessments in their supervision practices. Every department in the state now uses an assessment tool, and the majority of individuals on supervision undergo an assessment. Although departments are not always able to assess all of their individuals (for example, individuals may abscond and be placed on warrant status before the administration of the assessment), and probation departments

scale from 0 to 3, with 3 as a gold standard rating for a given aspect of evidence-based practices. Implementation levels for the five evidence-based practice categories are calculated by summing a department's responses in a particular category and dividing that sum by the total possible points for that category. Overall evidence-based practice implementation levels for each probation department are calculated by taking the average of a department's scores across the five evidence-based practice categories.

<sup>40</sup> Crime and Justice Institute, *supra* note 34.

occasionally base supervision decisions on factors other than RNA information (as mentioned previously for individuals on postrelease community supervision), the use of RNA tools has been incorporated into general supervision practices throughout the state.

### Evidence-based supervision practices

The relationship between a probation officer and an adult felony offender plays an important role in increasing the probability of an individual’s success on probation (Figure D.3). Officers can support offenders’ positive behavior changes by forming appropriate, motivating relationships with those they supervise.<sup>41</sup> Providing swift, certain, and proportionate responses to offenders’ negative behavior is also an important element that can increase the likelihood of success on supervision.<sup>42</sup> The Annual Assessment category of evidence-based supervision practices is based on 15 questions focused on the relationship between the probation officer and the offender. Probation departments have substantially increased the use of evidence-based practices since SB 678 began.

FIGURE D.3. EFFECTIVE SUPERVISION

### Programs/treatment/services and targeted intervention

Research suggests that treatment programs should address the individual offender’s assessed risk and needs, with a primary focus on dynamic risk factors. Cognitive behavioral therapy that addresses offenders’ antisocial thinking patterns has been demonstrated to be an effective technique for high-risk offenders. Research has also confirmed that the effectiveness of treatment programs increases when the programs are tailored to characteristics such as gender and culture.<sup>43</sup> The Annual Assessment category of treatment and targeted intervention implementation is based on five questions about how referrals are made and the existence of

<sup>41</sup> M. L. Thigpen, T. J. Beauclair, G. M. Keiser, and M. Guevara, *Motivating Offenders to Change: A Guide for Probation and Parole* (National Institute of Corrections, U.S. Dept. of Justice, June 2007).

<sup>42</sup> Mark A. R. Kleiman and Angela Hawken, “Fixing the Parole System” (Summer 2008) 24(4) *Issues in Science and Technology* 45; Faye S. Taxman, David Soule, and Adam Gelb, “Graduated Sanctions: Stepping Into Accountable Systems and Offenders” (June 1999) 79(2) *Prison Journal* 182–204.

<sup>43</sup> David B. Wilson, Leana Allen Bouffard, and Doris L. Mackenzie, “A Quantitative Review of Structured, Group-Oriented, Cognitive-Behavioral Programs for Offenders” (Apr. 2005) 32(2) *Criminal Justice and Behavior* 172–204.

treatment programs that have been evaluated for effectiveness, weighted by the amount of unmet need among medium- and high-risk offenders.

Probation departments have significantly improved in their use of evidence-based treatment since the implementation of the SB 678 program. Many departments developed their own evidence-based practice treatment programs or report having increased access to evidence-based practice treatment resources in their community; however, the majority of departments must rely on the treatment available in their communities. This is an area in which many probation departments report that improvements can still be made and that the need for an increased capacity of evidence-based practice treatment programs is persistent. Increased education and improved communication on evidence-based practice treatments available or potentially available are also needed. Reported programs, treatments, and services implementation rates remained constant in 2023 (Figure D.4).

**FIGURE D.4. PROGRAMS/TREATMENT/SERVICES**

### **Collaboration among justice system partners**

Effective implementation of evidence-based supervision practices requires buy-in from criminal justice partners. The collaboration of judges, district attorneys, public defenders, sheriffs, service providers, and others facilitates efforts by probation departments to put new procedures and protocols into place. Collaboration enables the entire justice system to provide a consistent focus on adult felony offender behavior change and recidivism reduction.<sup>44</sup> The Annual Assessment measures the level of collaboration implementation based on six questions about the ways in which the department works with its justice partners, including but not limited to courts and treatment providers. Nearly all probation departments have increased the level of collaboration within their counties since the baseline (Figure D.5). Those that have shown the highest degree

<sup>44</sup> Crime and Justice Institute, *supra* note 34.

**FIGURE D.5. COLLABORATION**

of collaboration have generally shown improved outcomes and are able to implement evidence-based practices that may involve additional justice partner buy-in.<sup>45</sup>

### **Management and administrative practices**

Clear direction, support, and oversight from probation department management are necessary to ensure that officers understand the department’s evidence-based practices and protocols and are motivated to work toward full implementation.<sup>46</sup> To assess how probation departments’ management and administrative practices align with evidence-based practices (Figure D.6), the

Annual Assessment includes nine questions that explore how hiring and performance-review guidelines and practices are linked to evidence-based practice skills and whether:

- Supervisors monitor evidence-based adult felony offender supervision practices by observing offender contacts;
- The department collects service and offender outcome data, and data are used internally to improve services and practices;
- There has been a formal evaluation of supervision practices; and
- Supervisors support and monitor the use of risk and needs assessments, motivational interviewing, and cognitive behavioral therapy.

**FIGURE D.6. MANAGEMENT AND ADMINISTRATION**

<sup>45</sup> See, e.g., Judicial Council of Cal., *The California Risk Assessment Pilot Project: The Use of Risk and Needs Assessment Information in Adult Felony Probation Sentencing and Violation Proceedings* (Dec. 2015), [www.courts.ca.gov/documents/cj-CalRAPP-FinalReport-2015.pdf](http://www.courts.ca.gov/documents/cj-CalRAPP-FinalReport-2015.pdf).

<sup>46</sup> Paula Smith, Paul Gendreau, and Kristin Swartz, “Validating the Principles of Effective Intervention: A Systematic Review of the Contributions of Meta-analysis in the Field of Corrections” (Feb. 2009) 4(2) *Victims & Offenders* 148–169.

The SB 678 program has been highly effective in increasing the use of evidence-based practices in probation departments throughout the state and has resulted in substantial reductions in the number of adult felony offenders going to state prison. Although the Judicial Council's Annual Assessment was not designed to measure the relationship between implementation of specific evidence-based practices and particular outcomes, Judicial Council researchers have begun to use data gathered through this survey to investigate the association between particular evidence-based practices and improved outcomes for probationers.

## Appendix E: Performance Outcome Measures for the SB 678 Program

**TABLE E. PERFORMANCE OUTCOME MEASURES FOR THE SB 678 PROGRAM (PEN. CODE, §§ 1231 & 1232)<sup>a</sup>**

	2017	2018	2019	2020	2021	2022	2023

MS = mandatory supervision; PRCS = postrelease community supervision; CDCR = California Department of Corrections and Rehabilitation.

<sup>a</sup> Except where indicated, all data were reported to the Judicial Council by 58 probation departments.

<sup>b</sup> The data reported are statewide averages, including for individuals on warrant status. This figure includes MS and PRCS.

<sup>c</sup> Probation departments were asked to list supervision policies, procedures, programs, and practices that were eliminated since the effective date of SB 678; 27 probation departments submitted data for this question. The information provided here is a summary of the open-ended responses.

<sup>d</sup> These data were taken from the 2024 Court Statistics Report, [www.courts.ca.gov/documents/2024-Court-Statistics-Report.pdf](http://www.courts.ca.gov/documents/2024-Court-Statistics-Report.pdf). Data are reported by fiscal year.

<sup>e</sup> For calendar year 2017, the data are from the CDCR's *Offender Data Points* (Dec. 2017), available at [www.cdcr.ca.gov/research/wp-content/uploads/sites/174/2021/06/DataPoints\\_122017.pdf](http://www.cdcr.ca.gov/research/wp-content/uploads/sites/174/2021/06/DataPoints_122017.pdf). Calendar year 2018, 2019, 2020, and 2021 data were provided by the CDCR Office of Research by request.

<sup>f</sup> This figure represents data from 56 probation departments.

<sup>g</sup> This figure represents probation departments able to report complete data for the year. In 2017, this figure represented 57 departments; in 2018, 55; in 2019, 56; in 2020, 2021, 2022, and 2023, 57.

<sup>h</sup> The substantial drop in felony probationers convicted of a crime in 2020 is likely because the COVID-19 pandemic reduced criminal and/or enforcement activity.
